# Cyber Hygiene Bundle Pack

The MAS Cyber Hygiene Notice as Ready-to-Run Controls, With Evidence and Audit Tests

| | |
|---|---|
| **Dataset ID** | PROFYTAI-MAS-CH-IMPL-1.0.0 |
| **Version** | 1.0.0 · Released 2026-07-14 |
| **Jurisdiction** | Singapore |
| **Issuing Authority** | Monetary Authority of Singapore (MAS) |
| **Coverage** | 12 controls satisfying all 9 binding obligations of the Cyber Hygiene Notice |
| **Classification** | Commercial Regulatory Intelligence · Licensed Distribution |

**Published by ProfytAI Pte. Ltd.** · support@profyt.ai · profyt.ai

EXECUTIVE SUMMARY

# Where the Datasets Tell You the Rules, This Pack Hands You the Way to Meet Them.

**The MAS Cyber Hygiene Notice (FSM-N06) sets nine binding rules every relevant entity must follow. Knowing the rule is only half the job: each institution still has to work out how to meet it, and how to prove it, to their auditors, their board, and MAS.**

The Cyber Hygiene Bundle Pack turns the Notice's nine binding obligations into twelve ready-to-run controls. Implement a control once and it satisfies every rule mapped to it, so a short, defensible control set covers the whole Notice. Each control ships complete: MAS-context implementation guidance, an evidence checklist with collection frequency and pass criteria, and the audit test an examiner runs.

Every mapping from rule to control is verified word-for-word against the MAS text and passed through an independent adversarial review before release. The result is a compliance kit a bank can open and work the same day, and a trail from rule to control to evidence that an auditor can rely on.

WHAT IS IN THE PACK

# Twelve Controls, All Nine Binding Rules.

The Notice's six measure areas map onto a compact control library. One control often discharges several rules at once, so the list stays short.

| | |
|---|---|
| **Administrative accounts (4.1)** | Account management and privileged-access controls |
| **Security patching (4.2)** | Flaw remediation and vulnerability monitoring |
| **Security standards (4.3)** | Baseline configuration and configuration settings |
| **Network perimeter (4.4)** | Boundary protection |
| **Malware protection (4.5)** | Malicious-code protection |
| **Multi-factor authentication (4.6)** | MFA for privileged and customer-facing accounts |

**Every control ships with:**

- MAS-context implementation guidance, written for MAS-regulated institutions
- An evidence checklist, with a collection frequency and a pass criterion on every item
- A pre-written audit test procedure, the same checks an examiner runs
- A suggested owner and testing cadence, and a link to the exact MAS rule it satisfies
- A plain-English how-to booklet accompanies the pack, so a non-technical reader knows exactly what to do

ONE CONTROL, START TO FINISH

# What You Are Buying, Concretely.

## A worked example: the control for administrative accounts, which satisfies the mandatory rule that every administrative account be secured against unauthorised access or use.

| | |
|---|---|
| **The rule it meets** | "A relevant entity must ensure that every administrative account ... is secured to prevent any unauthorised access to or use of such account." (FSM-N06, paragraph 4.1) |
| **What to do** | Control who is given administrative accounts, remove access as soon as someone changes role or leaves, and review the list regularly. No shared admin credentials without a managed check-out. |
| **Suggested owner** | Head of Identity and Access · reviewed semi-annually |
| **Proof to keep** | A current administrative-account register per platform, reconciled to the approved-account workflow, showing every account was properly approved. |
| **How it is tested** | An auditor obtains the register, samples accounts, and confirms each was approved. The pack includes the exact procedure, so you run it on yourself first. |

Every one of the twelve controls is documented to the same depth. Formats: an Excel workbook (Coverage, Methodology, Control Matrix, Traceability, Evidence Checklist, Reference), plus JSON and CSV for GRC tools and pipelines.

PRICING

# One-Time License, Updates Optional.

**The pack is a one-time commercial license, delivered by instant download. A free update ships when MAS revises the Notice; an annual update subscription is optional.**

| | |
|---|---|
| **Cyber Hygiene Bundle Pack** | $3,900 one-time · 12 controls, all 9 binding obligations, with guidance, evidence, and audit tests |
| **Free Sample** | A 30-record sample of the underlying MAS obligation data, to judge the depth first, at no cost. |

Prices in USD, one-time; an annual update subscription is optional. Purchase and instant download at profyt.ai/data/mas.

LICENSING

# Terms of Use.

| | |
|---|---|
| **Commercial License** | A commercial license for the single legal entity named on the order to use the pack internally. Affiliates and subsidiaries need their own license or a multi-entity agreement. Full terms travel with every delivery as LICENSE.md. |
| **Permitted Use** | Internal compliance, risk, and audit use: control implementation, gap assessment, evidence collection, audit preparation, and reporting within the licensed entity. |
| **Redistribution** | The pack may not be resold, sublicensed, or redistributed. Redistribution, OEM embedding, and multi-entity terms are available as a separate private offer. |
| **Updates** | Each release is a point-in-time, dated version. An optional annual update subscription delivers each new version on reissuance; a confirmed error is corrected and reissued free to licensees of that version. |
| **Support and Assurance** | A signed Data Processing Agreement and security documentation are available on request. Licensing and support: support@profyt.ai. |

Grounded in the MAS Cyber Hygiene Notice; implementation and test substance is cross-referenced to NIST SP 800-53/800-53A, a recognized control standard, and is not mandated by MAS. This dossier is commercial collateral and is not itself a license, nor a substitute for legal or compliance judgement.

## ABOUT PROFYTAI

ProfytAI builds structured regulatory intelligence for financial institutions. Where our obligation datasets compile a regulator's source documents into examination-ready records, the implementation packs turn those obligations into ready-to-run controls, with the evidence and audit tests a bank needs to comply and to prove it. Singapore Regulatory Intelligence is live today across MAS TRM, Cyber Hygiene, and Outsourcing; further frameworks are on the roadmap.
